Chrysanthemums

CULTURE—Chrysanthemums are best planted during May and early June. If planted too early they become woody and foliage turns brown before blooming season. Fertilize heavy and water frequently during growing season. Plants should be watched for aphids or plant lice, against which frequent spraying with nicotine solution is advisable. Large flowered varieties should be given some protection during winter. The best plants are grown from rooted cuttings.

All of the following plants are made from rooted cuttings which are the best obtainable. Ready May 1st.
